The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/689,280

Applicant(s)

BEAUMONT, MARK

Examiner

ABDULLAH AL KAWSAR

Art Unit

2195

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 February 2008.
2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-15 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
5) ☐ Claim(s) _____ is/are allowed.
6) ☒ Claim(s) 1-15 is/are rejected.
7) ☐ Claim(s) _____ is/are objected to.
8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
10) ☒ The drawing(s) filed on 01/26/2004, 02/29/2008 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
3) ☐ Information Disclosure Statement(s) (PTO/S508)
Paper No(s)/Mail Date _____
4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date _____
5) ☐ Notice of Informal Patent Application
6) ☐ Other: _____

DETAILED ACTION

1. Claims 1-15 are pending.

Specification

2. The abstract of the disclosure is objected to because the abstract exceeds acceptable word length, the abstract is over 200 words. Correction is required. See MPEP § 608.01(b).

3. Applicant is reminded of the proper language and format for an abstract of the disclosure. The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

4. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: claim 15, "computer readable" is not disclosed in the specification to

Art Unit: 2194

support the claimed computer readable memory. Applicant is suggested to amend the claim to recite “a computer memory device storing a set of instruction”.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claim 15 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Currently amended claim 15 recites “computer readable memory device” does not appear to be described in the specification in such a way as to reasonably convey to one of ordinary skill in the art that at the time the application was filed had possession of the claimed invention.

7. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

8. Claims 2-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

- a. The following claim language is vague or indefinite.

- i. As per Claims 2, 6 and 9, it is uncertain as to what is included in z how is the relationship among other variable (i.e. integer number, positive number, bigger, less than, etc.).

Claim Rejections - 35 USC § 103

9. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

10. Claims 1-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ebner et al.(Ebner) US Patent No. 6594718.

11. As per Claim 1, Ebner teaches the invention substantially as claimed including a method of generating a pattern for n lots of A and (2^z-n) lots of B, where n and z are positive integers (col 7, lines 15-20; col 6, lines 18-20) comprising:

creating a key comprised of the reverse bit order of a serially indexed count from 0 to 2^z (Col 3, lines 9-13; col 6, lines 15-19);

corresponding to said key in which all values in the key less than n are replaced by A and all other values in the key are replaced by B (column 4, lines 32-36; col 6, lines 33-45; col 7, lines 52-64);

However, Ebner does not explicitly disclose generating an interleave pattern correspondence to a key.

12. It would have been obvious to one of the ordinary skill in the art at the time of the invention to create an interleave pattern from a key of reverse bit order sequence of number as it is well known in the art to create interleave pattern from sequence of numbers representing a specific pattern.

Ebner does not specifically disclose distributing said n lots of A tasks and $(2^2 - n)$ lots of B tasks to a plurality of processing elements according to said interleave pattern to balance the workload across said plurality of processing elements and B equals $A+1$ (figure 5, col 7, lines 34-51).

13. It would be obvious to one of the ordinary skill in the art at the time of the invention to utilize the reverse bit algorithm for creating a interleave pattern for distributing loads in a number of processing elements with different variable values based on the systems load condition. The algorithm is used to distribute access tokens between multiple tokens for an even distributed balanced operation and it would be obvious to use it for distributing loads between processing elements as the purpose of the usage and the result would be same with different set of variable with different values.

Art Unit: 2194

14. As per Claim 2, Ebner teaches the invention substantially as claimed including a method generating a pattern for lots of A and lots of B, wherein n and y are positive integers, n plus y does not equal to power of two (col 7, lines 15-20; col 8, lines 4-9) comprising:

creating a list in which the entries are comprised of the reverse bit order of the serially indexes count from 0 to 2^z (Col 3, lines 9-13; col 6, lines 15-19).

selecting a portion of a list (figure 5; col 8, lines 10-14);

renumbering the selected portion of the list to form a key (figure 6); and

corresponding to said key in which all values in the key less than n are replaced by A and all other values in the key are replaced by B (column 4, lines 32-36; col 6, lines 33-45; col 7, lines 52-64).

However, Ebner does not explicitly disclose generating an interleave pattern correspondence to a key and B equals A plus 1.

15. It would have been obvious to one of the ordinary skill in the art at the time of the invention to create an interleave pattern from a key of reverse bit order sequence of number as it is well known in the art to create interleave pattern from sequence of numbers representing a specific pattern and to use variables of different value to utilize the algorithm in different prospective.

Ebner does not specifically disclose distributing said n lots of A tasks and y lots of B tasks to a plurality of processing elements according to said interleave pattern to balance the workload across said plurality of processing elements (figure 5, col 7, lines 34-51).

16. It would be obvious to one of the ordinary skill in the art at the time of the invention to utilize the reverse bit algorithm for creating a interleave pattern for distributing loads in a number of processing elements with different variable values based on the systems load condition. The algorithm is used to distribute access tokens between multiple tokens for an even distributed balanced operation and it would be obvious to use it for distributing loads between processing elements as the purpose of the usage and the result would be same with different set of variable with different values.

17. As per Claim 5, Ebner teaches renumbering in order of ascending value (col 7, lines 23-24).

18. As per Claim 6, Ebner teaches the invention substantially as claimed including a method comprising:

creating a key comprised of the reverse bit order of a serially indexed count from 0 to 2^z
(Col 3, lines 9-13; col 6, lines 15-19);

storing the table (figure 4);

creating a table of patterns for all values of n lots of A and $(2^z - n)$ lots of B where n is a positive integer and B equals A+1 (figure 4, 6, 5; column 4, lines 32-36; col 7, lines 15-20; lines 31-34; lines 52-64;);

However, Ebner does not explicitly disclose generating an interleave pattern correspondence to a key.

19. It would have been obvious to one of the ordinary skill in the art at the time of the invention to create an interleave pattern from a key of reverse bit order sequence of number as it is well known in the art to create interleave pattern from sequence of numbers representing a specific pattern.

Ebner does not specifically disclose distributing said n lots of A tasks and $(2^z - n)$ lots of B tasks to a plurality of processing elements according to said interleave pattern to balance the workload across said plurality of processing elements (figure 5, col 7, lines 34-51).

20. It would be obvious to one of the ordinary skill in the art at the time of the invention to utilize the reverse bit algorithm for creating a interleave pattern for distributing loads in a number of processing elements with different variable values based on the systems load condition. The algorithm is used to distribute access tokens between multiple tokens for an even distributed balanced operation and it would be obvious to use it for distributing loads between processing elements as the purpose of the usage and the result would be same with different set of variable with different values.

21. As per claim 7, Ebner further discloses automatically selecting an interleave pattern from the table based on one of the values of n and $(2^z - n)$ (col 6, lines 15-20; col 8, lines 4-14).

22. As per claim 9, it has similar limitations of claims 6 and 9 above. Therefore it is rejected under the same rational as of claims 6 and 9 above.

23. As per claim 12-13, they have similar limitations as of claims 5 and 7 above. Therefore they are rejected under the same rational as of claims 5 and 7 above.

24. As per claim 15, it has similar limitations as of claim 1 above. Therefore it is rejected under the same rational as of claim 1 above.

Allowable Subject Matter

25. Claims 3, 4, 8, 10, 11 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

26. Applicant's arguments with respect to claim(s) have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

27. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

28. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

29. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ABDULLAH AL KAWSAR whose telephone number is (571)270-3169. The examiner can normally be reached on 7:30am to 5:00pm, EST.

30. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng Ai T. An can be reached on 571-272-3756. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Art Unit: 2194

31. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
